PRESCHOOL INQUIRY TRIPS

CHEMISTRY & COLOR
Come investigate the fizzing, foaming, bubbling, and color combinations of chemistry in this hands-on science exploration.

FIVE SENSES
Children investigate the world with all of their senses, just like scientists do - help them put names to what they already know how to use. Explore the sensations of taste, sight, smell, touch, and sound through a variety of hands-on activities.

PLANTS
Kids love plants - from rolling in the grass and picking flowers, to eating delicious fruits and veggies! Take advantage of their natural fascination with plants in activities such as dissecting flowers, examining seeds, or starting their very own mini greenhouse.

SPACE
Children will explore their place in the universe and become astronomers in a session designed to introduce the planets, stars, and everything in between.

DINOSAURS
Travel back in time to the age of the dinosaurs! Children have so many questions about dinosaurs. What did they look like? How big were they? What did they eat? How do fossils form? We’ll find answers to those questions and more as we do a variety of hands-on activities.

WATER (MAY-SEPTEMBER)
It’s no secret that children love playing with water! Learn about the forms, reactions, and uses of water in this session. Explore water in all its phases, the differences between wet and dry, and water at work. Just add water for fun! (This session is outdoors and weather dependent.)

CUSTOM ACTIVITIES
Planning a theme week for your preschool class? Let us create a workshop customized to fit your topic! Please request customized activities at least two weeks in advance.
